

## Silent Night V.6.3 Mod ([~gchristnsn](#))

This is a modification of the original Silent Night V.6 foobar2000 skin by [Arnie77](#).

The skin could be useful if you prefer a well-structured file-system tree over the media library to access and categorize your music.

### Differences from the original version

- [Modified Explorer Tree](#) is used instead of the media library filter. This component uses folder.ico file found in the root of the foobar2000 directory to display folder icons. The media library filter is still available on the graphical browser panel (see below).
- Additional component for [bookmarking](#).
- [Masstagger](#).
- Removed obsolete components:
  - iPod manager
  - Podcatcher
  - Last.fm radio
  - Chronflow

### Layout

Button

- First press: simple playlist
- Second press: simple playlist + file system explorer

Button

- First press: ng playlist
- Second press: ng playlist + file system explorer

Button

- First press: graphical browser + media library filter
- Second press: bookmark list + simple playlist

Button

- Single press: bio/shpeck viz + simple playlist (toggled by the triangle buttons at the top left and right)

### Installation: same as for the original Silent Night

- Install foobar2000 using the portable mode with the all options checked (full installation).
- Merge the skin and foobar2000 folder contents **before the first foobar launch**.
- Select **Columns UI** after the first launch.
